**Importance:** High

---

The following table is a summary of all our work on Public Water Systems in Bravo Branch. Our workload consists of systems with an operational status code that are highlighted. Once a system has a status of RESULTS (i.e., waiting for bacteriological results to lift a BWN).

<b>StatID</b>	<b>LastStatus</b>	<b># PWS</b>
1	OK	1372
2	CLEAR	83
3	RESULTS	19
4	SITE	7
5	INOP	4
6	LP/LT	23
7	GENLP	1
8	GENOK	2
9	OUT	19
10	UNKNOWN	3

Our workload for Tuesday is 40 water systems. Our process at this point is to revisit all systems that are NOT a status of "SITE" every 2 to 3 days. Those with a "SITE" status are scheduled for a site visit each day until one is conducted.

Based on this workload, we propose to demobilize at least the Texas State Guard or at least 8 total field staff that are NOT TCEQ staff as TCEQ is rotating staff among all our teams on a routine basis and provide staff based on need already.

Our current field staffing levels include:

**TCEQ**                      **Field Staff: 6 (more are available if needed)**

**Texas State Guard**    **Field Staff: 8**

**EPA R7**                      **Field staff: 7**

Brandon Boatman

Krystal Stotts  
Candace Bednar  
Neftali Hernandez-Santiago  
Kim Willis-Burr  
Laura Webb  
Mike Martin

**EPA R6**

**Field Staff: 2**

Miguel Moreno  
José Rodriguez

Thanks,

**Mark McCasland**
